                                                                                                                                                                                                                                                                                                                                                                                                                Ikeda S., Kishida S., Yamamoto H., Murai H., Koyama S., Kikuchi A.;

Axin, a negative regulator of the Wnt signaling pathway, forms a

complex with 65K-3beta and beta-catenin and promotes GSK-3beta-

complex with 65K-3beta and beta-catenin.*;

complex with 65K-3beta and promotes GSK-3beta-

complex with 65K-3beta and promotes GSK-3beta-

complex with 65K-3beta and promotes GSK-3beta-

complex min probably facilitate the phosphorylation of Beta-

catenin and Apc by GSK-3b and Beta-Catenin. The interaction of Between axin and Beta-catenin occurs via the Armadillo Repeats

contained in Beta-catenin. Ternary complex. Also Binds to

plakoglobin (GAMMA-CATENIN). APC, DVI AND PP2A (BY SIMILARITY).

complex minds and beta-catenin. Ternary complex. Also Binds to

plakoglobin (GAMMA-CATENIN). APC, DVI AND PP2A (BY SIMILARITY).

NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequencing vector: M13; L08821

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Oct 1, 1998 this sequence version replaced gi:3482897. Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        were canonical splice junctions that across the splice junctions.

NOTE: Estimated insert size may differ from sequence length (see http://www.bgsc.bcm.tmc.edu/docs/Genbank_draft_data.) NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    as soon as it is
be preserved.
